Because any end user/owner seeks safety, dependability, and integrity, any Inspection/Third Party Inspection process would adhere to a general criterion of examination of materials, products, installations, plant, processes, work procedures, or services, and determination of their conformity with requirements, with subsequent reporting of the results of these activities to clients. By having your business services and systems inspected, you give your firm the opportunity to expressly demonstrate its duty for ensuring that its facilities, equipment, products, and services conform to quality, health and safety, environmental and social responsibility imperatives.
